

## 1.3.4: Missing Data and Sampling Weights

(Asynchronous-Online)

## **COMING SUMMER 2025**

Module "1.3.4: Missing Data and Sampling Weights" will be posted prior to the In-Person Workshops in Summer 2025.

## **Session Objectives**

- 1. Identify and summarize missing data.
- 2. Learn methods to handle missing data according to variable type.
- 3. Use a survey sampling weight to generate more representative descriptive and inferential statistical values (brief intro)
- 4. Discuss potential bias when removing missing observations without careful examination.

## Key points:

License CC BY-NC-ND 4.0

- 1. R packages that support missing data examination
- 2. Mean/median imputation for continuous variables
- 3. What to do with missing observations for categorical variables
- 4. Ways to examine potential differences between complete and missing observations in association between certain independent and dependent variables
  - What to do if such association significantly differs between complete and missing observations
- 5. R packages for complex survey data (e.g., survey package)
  - R codes to generate weighted descriptive statistics and contingency tables, as well as to develop weighted linear models
